

[6 Fixes to Facebook Group Posts Not Being Seen in 2023 - Hollyland.](#)

Method 1- Understanding the Algorithms

Step 1- Open Facebook Account Feed

Open your Facebook **account** and click the “**profile icon**” from the top-right corner. Then click “**Settings and Privacy**” and select “**Feed.**”

Step 2- Adding the Groups

After that, click on the specific **group** to see more detailed posts about it and **ensure the snooze button is turned off.**

From there, you can **reconnect or unfollow** groups to view or remove their content from your feed.

Method 2- Group Notification

Step 1- Ensuring Notifications

Open your **Facebook group** and click on “**Joined**” from the right.

Then click to receive the **notifications** of “**All Posts**” from “Friends,” or turn them off.

Step 2- Push Notifications

From your mobile app, click the “**three-dot**” **icon** from the top-right corner and select “**Notification Settings.**”

After that, select the notifications you want to turn on and ensure to click on the “**Push Notifications**” for instant post updates.

Method 3- Removing Cache and Cookies on your Browser

Removing from App

Open the Settings: Open the Facebook app and click on the “**Menu Icon**” from the top-right corner of the screen. Click “**Settings and Privacy**” and select “**Settings**” from the popup window.

Clear Data: Navigate and click on “**Permissions,**” then tap on “**Browser.**”

Click the “**Clear**” button from the next window to clear the app’s cache data.

Removing from the Browser

Open Browser: Open your website browser and click the “**three-dot**” tab icon from the top-right corner.

Clear Data: Click “**More tools**” from the bottom and select “Clear Browsing Data.”

Remove the browser’s “**cookies and cache,**”
